

HYDROTECH

Problems

MAIN PROBLEM

Despite sensitization efforts on television and in schools, a significant majority of K-12 students lack a sufficient understanding of water and are unaware of the dangers it poses.

The primary issue gives rise to secondary problems and complications.

Solutions

Teaching K-12 students about water in innovative ways, such as using games, animations, and a financial reward systems.

Numerous studies conducted by various researchers have demonstrated that integrating interactive and enjoyable learning experiences is a highly effective method in the realm of education.

Solutions

We should leverage popular methods like social media to engage both K-12 students and even adults to know more about water, making learning more accessible and appealing to a wider audience.

Product Overview

Our product is a website offering diverse services and contents. It provides articles, games, animations and interactive elements for users

**Games
library**

**ATTRACTIVE
WEB DESIGN**

ANIMATIONS

**articles/
blogs**

Marketing side

TEAM'S IMAGES PROVIDER

Thank You

In the near future, we will introduce exciting features such as forums and chat rooms for discussions, the ability for users to upload their games, a platform for writing blogs, and a hub for developers and engineers to collaborate on solutions for water-related issues. These additions will further enrich our platform and promote user engagement and innovation.
